

PIONEERS IN BIOMEDICAL RESEARCH SEMINAR

Presented by the Fralin Biomedical Research Institute at VTC and co-sponsored by the institute's Center for Human Neuroscience Research

Continuous Decision-Making

The majority of research on decision-making focuses on discrete decisions, that is, ones that take place at a single moment in time and between a discrete set of options. In the natural world, however, decisions are often made in continuous contexts, and from a continuous range of options. In this talk, Dr. Hayden will discuss ways that the neuroscience of decision-making can be extended to encompass the continuous nature of real choice.

BENJAMIN HAYDEN, Ph.D.

Professor

McNair Scholar of Neurosurgery

Baylor College of Medicine

FRIDAY, MAY 17, at 11 a.m.

Room G101 A/B, 4 Riverside Circle
